NEW PoC CONNECTIVITY: POWER SUPPLY OVER COAX

Power Over Coaxial "PoC", is the result of supplying power to cameras from a PoC DVR directly, operating through a single point; eliminating the need to connect the camera to a power supply.

This technology allows video signal in high definition and energy required by the device to be routed through a single coaxial cable.

This property saves time and resources in the camera installation, since PoC can connect the device directly, eliminating the processes of electrical preparation.

This innovation will mean a saving of time and investment in projects, by making the installation much simpler and more profitable.
